

CASE STUDY

Multi-Channel Outreach Maximizes COVID-19 Vaccination Appointments

Working with Actium Health to deploy a pair of outreach campaigns, HonorHealth successfully navigated patient engagement challenges and increased vaccination appointments by 30%.

KEY OUTCOMES

Rapid campaign deployment

Using Actium to launch efficient and effective communication campaigns quickly — in response to lagging scheduling volume — to ensure available vaccine doses were fully utilized.

Multi-channel messaging

Targeting two difficult-to-engage, critically important audiences with tailored SMS outreach.

Optimized patient scheduling

Driving target populations of eligible patients to schedule more than 2,000 vaccination appointments in less than two weeks.

Addressing an Urgent Communication Need

Arizona was hit particularly hard by COVID-19. It led the country in coronavirus-related hospitalizations with roughly 90% of ICU beds occupied during the summer of 2020, and was the first state to trigger “crisis care standards” to help healthcare workers determine the prioritization of treatment.

Serving more than 3 million patients, including 1.6 million individuals in greater Phoenix alone, HonorHealth recognized the lofty yet noble task it faced after learning that vaccines for the virus would become available in December 2020. It would need to efficiently and effectively communicate the vaccine’s availability to its patients to get as many eligible individuals vaccinated as quickly as possible.

Tailoring Outreach for Multiple Audiences

In mid-January 2021, vaccination appointment scheduling volume had slowed significantly. Fifteen hundred appointment slots needed to be filled as vaccines were not being fully utilized. Action needed to be taken quickly.

Having an intimate understanding of its patient demographic, HonorHealth identified two patient groups it knew would be particularly difficult, yet critically important, to engage:

- **Individuals age 75+**
- **Underserved communities**

More than 37% of Phoenix’s population do not speak English as their primary language, and more than 17% of the city’s households do not have a broadband internet connection. Without reliable internet access and information about eligibility and registration provided in their native language, it’s likely that available appointments would continue to go unfilled, and vaccination rates would remain low.

A non-traditional and highly tailored method of engagement was needed.

“Actium enabled us to quickly and proactively reach out to eligible patients who were most likely to schedule vaccine appointments via SMS with near immediate results.”

37%

of the population does not speak English as a primary language

17%

of households do not have broadband Internet

Engaging Patients Through Multiple Channels

Partnering with Actium, HonorHealth developed and launched a multichannel vaccination campaign that included SMS messages to fill the empty appointments by engaging the two target patient groups.

CAMPAIGN ONE

SMS outreach to patients 75+

Same-day text messages were sent to patients over 75 who had either interacted with a COVID vaccine information page, and/or read a MyChart message notifying them of vaccine eligibility (but had not scheduled an appointment.)

CAMPAIGN TWO

Text messages to individuals in underserved communities

Working closely with Neighborhood Outreach Access to Health (NOAH), its sister organization of community health centers serving more than 40,000 patients throughout Metro Phoenix, 2,800 text messages were deployed to individuals in underserved communities, resulting in:

- **1,000 more inbound calls a day** to NOAH's call center — a 30% increase
 - **50% of recipients who received an SMS message engaged within 24 hours** (as demonstrated by same-day inbound calls)
-

“By deploying highly tailored communications to our target patient populations, we were able to get shots into arms while ensuring that vaccine doses did not go to waste. Actium’s team understood the urgency of our need and worked quickly to develop and deploy a highly effective solution.”

HonorHealth

Driving Greater Utilization of Vaccinations

As a result of the two campaigns, more than 2,000 vaccination appointments were scheduled at HonorHealth in less than two weeks, exceeding the goal by more than 500 appointments, and a 30% increase in patient scheduling for the COVID vaccine at NOAH.

“Actium enabled us to quickly and proactively reach out to eligible patients who were most likely to schedule vaccine appointments via SMS with near immediate results.”

CRAIG KARTCHNER — AVP of Marketing & Customer Experience, HonorHealth

Building on Successful SMS Outreach

The success of these multi-channel campaigns led HonorHealth to immediately adopt SMS outreach & management as part of their critical communications and data-driven campaigns across their organization and NOAH.
